# PLASTISOLS

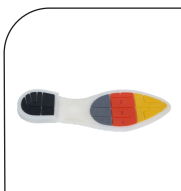

MANUFACTURERS OF HIGH GRADE QUALITY COMPOUNDS

**PLASTISOL** is a physical mixture of vinyl resins and compatible plasticizers. Unlike most fluid materials they consist of 100% solids and do not require the evaporation of solvents or water. Fusion at elevated temperatures drives the plasticizer into the resin and changes the plastisol into a homogeneous solid plastic material with the same excellent physical properties commonly associated with other vinyls - flexibility, toughness, abrasion and chemical resistance, unlimited colour possibilities and excellent resistance to ageing.

## APPLICATIONS

Artificial Leather | Automotive Artificial Leather | Car under Body Sealants | Carpet Backing and Heavy Weight Coatings | Conveyor Belts | Dipped Goods and Dip Coatings | Dolls, Balls, Toy Animals, Anatomic models etc. | Wall Coverings | Coated Textiles, Tarpaulins, Tents | Coil Coatings | Roofing Membranes | Sealants for Closures, Gloves, Boots | Tools Hangers & Zigs | Watch Straps | Customization Auto Parts | Dress material logos | Insulation of Tapes
